- *Easy to Install & Operate*
- *Real-time Non-Distorted View*
- *Records Visitors' Images Automatically*
- *Stores up to 100 Pictures*
- *Includes Door Bell & Intercom*

The doorbell rings but the owner is not expecting any visitors. There is no longer any need to feel alarmed because there is now an innovative product that help safeguards any home and family from unwanted visitors by offering an extra sense of security.

The DoorGuard is a digital door viewer with auto picture taking function that allows users to see visitors clearly on the TFT color display and automatically records visitors' images with a date and time mark when not at home. Enjoy total visibility and more control indoors!

Indoor Viewing Unit:
112mm (H) x 115mm (W) x 23mm (D)

Outdoor Recording Unit:
76mm (H) x 38mm (W) x 20mm (D)

Features:

- 4 in1 digital security viewer – built-in digital camera, color display, intercom and chimes
- User-friendly design – so simple to use that even senior citizens and kids can operate
- Hassle free installation – replace the optical door viewer in minutes
- High sensitive camera – the visitor's picture can be taken even in poor light conditions
- 2.4 in (6cm) TFT color screen – provides clear and non-distorted images
- Unbreakable and weather-resistant outdoor unit
- Auto/Manual picture-taking function
- Built-in memory – stores up to 100 pictures
- Date & time mark on all pictures taken
- Energy saving – automatically switches to stand-by mode when left idle for 30 seconds
- Extra long battery life – operates on 4 x AA alkaline batteries with runtime more than 1 year
- Choice of bell tones – pick from 5 different sounds
- Volume control – side switch to adjust door bell sound level
- Stylish colors – available in black or silver

senior citizens & kids can operate!!

How it works:

- When the doorbell is pressed, the unit will produce a chime
- Both the screen and intercom will turn on immediately
- Real-time image of the visitor will appear on the screen
- Picture of the visitor will be taken automatically and stored in the memory
- Pictures taken offer a record for the user as an extra measure of security

When at home:

- The user can communicate with the visitor through the built-in intercom by pressing the "push-to-talk" button
- If the visitor is unfamiliar, the user can ask the visitor to show his/her ID documents and take pictures of the ID manually by pressing "camera button"

When not at home:

- Pictures of each visitor will be taken automatically and stored in the memory
- When the user returns, he/she can review the images of the visitors stored in the memory
- Users can easily identify suspicious persons who check out their home frequently
